Restek 6-Liter Stainless Steel Summa Canister

\*Note: Pictured above is a single canister setup used for the VOC screening project during the winter of 2004-2005. This setup has been modified as shown below so duplicate samples can be collected during the Air Toxics Monitoring Project that begins in September, 2006. Also, plastic coupling(s) shown above have been replaced with 316L stainless steel couplings, as shown below.

Ambient sample manifold inlet (metal tubing with glass funnel) on outside of instrument shelter at Pryor site.
